

# Active POS

Smart monitoring  
of checkout transactions

# Recorded losses in retail

**47%**

losses in statistics

---

**DIRECT LOSSES:**

cases of obvious theft and fraud.  
Lead to a shortfall that can be  
identified during stock-taking

**Beyond  
the statistics**

---

**INDIRECT LOSSES:**

when the cashier shortchanges  
the customer. The resulting  
loss is higher due to  
reputational costs

# More than half of all losses occur at the POS

Common examples of violations:

## Deliberate theft

- Cancellation or partial receipt printing
- Unsettled receipt, when the cashier's accomplice takes goods using previous customer's receipt
- Returns
- Extra goods
- 1+1 offer positions
- Customer loyalty card fraud

## Mistakes and carelessness

- Cashier gets the goods mixed up (regrading)
- Errors in the quantity of goods
- Ignoring deliberately under-weighed goods
- Errors when taking goods off the receipt

## Violation of cash register discipline

- Shop opening and closing time
- Talking on the phone while working at the POS
- Leaving the workplace
- Mess at the workplace

## The smart module ensures synchronisation of the POS with the video stream:

upon reaching ActivePOS, events from the POS go through a checklist according to set parameters, in case of a violation an incident (notification of a violation with a short video clip) is generated and output to the operator for checking. The module also improves the efficiency of conflict resolution with customers.

- Events from the POS and checkweigher are synchronised with a video stream

- Event search and selection based on parameters

- Displaying alarm events for the operator
- Viewing instances in the recording
- Creating a report

# Solution best suited for

**TRASSIR**<sup>®</sup>

**Hypermarket**

**Convenience store**

**Specialised stores**

**Fuel station**

**Banks**

**Fast food restaurants**

**Pharmacy**

# Detecting theft and fraud

## VIOLATION

---

- **Receipt cancellation**

The customer did not wait for the receipt and left. The cashier cancelled the purchase and kept the money

- **Fake return**

Using the receipt left by the customer, the cashier returns the goods that were actually sold and takes the money

- **Cashier's personal discount card**

The cashier does not clear the receipt and waits for the customer to leave. Uses own discount card. Takes the resulting difference between the amount paid and the sum total

## DETECTION:

---

Viewing incidents of cancelled receipts paid in cash

Viewing cases of returned goods

Viewing cases when the same discount card is used - for example, more than twice per working day

# Detecting cashier errors

## VIOLATION

---

- Error when letting through a group of products

When scanning a multipack, the cashier scans the barcode of one product and forgets to enter the actual number of items in the multipack. As a result, the amount on the receipt is for just one item and not the whole package

- Error when entering the product code manually

When entering the product code manually, the cashier makes an error and sells another product with a different price. As a result, there is a mix-up

- Error in the quantity or weight of goods

The cashier makes a mistake when entering the quantity of goods (for example, enters 77 instead of 7), deletes the wrong digit, and does not enter the correct quantity of goods. The customer gets the goods for free because of the error

## DETECTION:

---

Viewing the entry of groups of goods into the system, during the sale of which such an error might occur

Viewing manual entry of product codes

Viewing instances when the number of goods is changed, after which the goods disappeared from the receipt

# Detection of violations cash register discipline

## VIOLATION

- Opening a cash register without payment

Unjustified opening of a cash box with the threat of the cashier pocketing cash that is unaccounted for

- Selling alcohol without verifying the customer's age

Before selling alcohol, the cashier must make sure the customer is an adult by checking their ID

- Not checking high-value notes

High-value notes shall be checked on a detector to avoid payment with counterfeit banknotes

## DETECTION:

Viewing instances of a cash box being opened without the customer paying in cash

Checking the sale of all goods from a given list (alcohol, cigarettes)

Viewing purchases paid for in high-value notes

# Key advantages

Reduction of financial losses at POS via quick search of incidents

Creation of any search algorithms and combinations of events

Only **1 operator per 100 POS** at several stores

Common interface for multiple locations

Flexible filter parameters and events sorting

Reduced service time in case some receipt positions are cancelled

**100+** types of violations

**50%** reduction of cash losses

**10k+** TRASSIR modules reduce the financial losses of our customers every day

**99,9%** equipment is compatible with the ecosystem TRASSIR

# Common interface

## One-contact principle

Timely prevention of violations

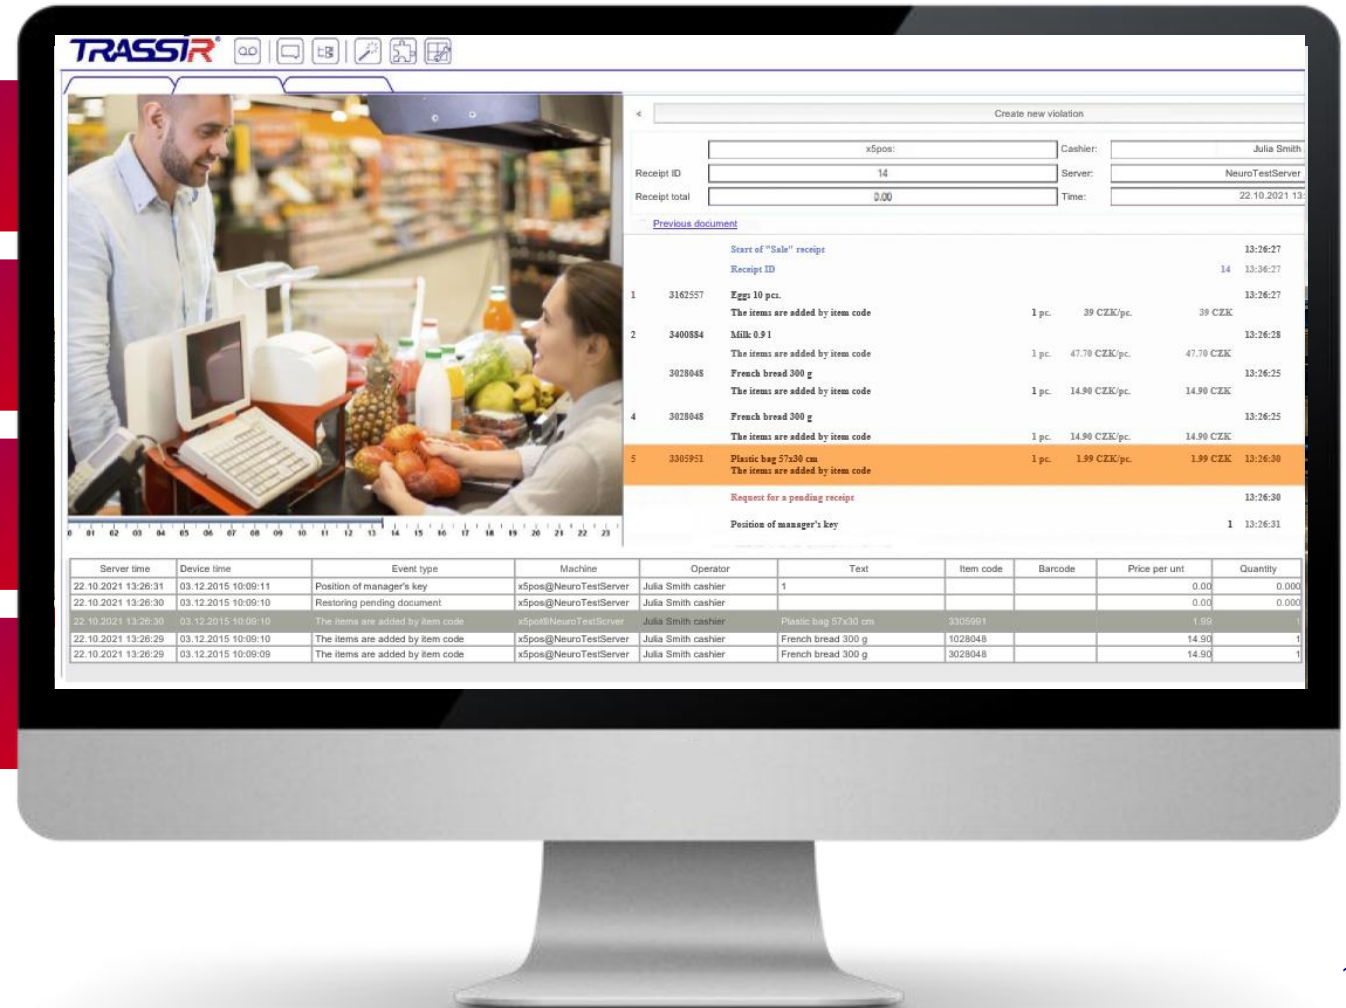

Multiple stores at the same time

100+

Types of violations for analysis

Generating detailed and convenient reports with one click

# Timely prevention of violations

## Timely prevention of violations

Multiple stores at the same time

100+

Types of violations for analysis

Generating detailed and convenient reports with one click

- Automatic selection of suspicious incidents and immediate notification
- Broadcasting incidents and operations from the cash register in the visual backdrop
- Options for filtering and sorting per specific cashier or store

# Timely prevention of violations

Automatic withdrawal of incidents online based on specified setting rules

Timely prevention of violations

Multiple stores at the same time

100+

Types of violations for analysis

Generating detailed and convenient reports with one click

The screenshot displays the TRASSIR software interface. On the left, a video feed shows a cashier in a blue uniform working at a POS terminal. On the right, the 'Create new violation' form is visible, showing fields for POS (New terminal), Receipt ID (78), Receipt amount (24.03), Cashier (Robert Taylor), and Server (DESKTOP-CCGMIRD). Below the form, a list of receipt events is shown, including 'Cash payment', 'Receipt printing', 'Receipt end', and two 'Item is cancelled' entries. The bottom of the screen features a table with the following data:

Server time	POS time	POS	Event type	Cashier	Price per unit	Quantity	Value	Receipt ID
11.12.2021 23:18:31	27.01.2014 13:15:39	New terminal1@DESKTOP-CCGMIRD	Receipt cancellation	Robert Taylor	0.00	0.000	0.00	226

# Sorting incidents

by type of violations, cost of damage, number of incidents

 Timely prevention of violations

 Multiple stores at the same time

**100+** Types of violations for analysis

 Generating detailed and convenient reports with one click

# Reduced service time

## In case some receipt positions are cancelled

- The traditional method of fraud prevention, when each incident of cancelling goods in the final receipt requires confirmation from the senior staff
- **Queuing** - people with small purchases are leaving as they are unwilling to waste time in queues, the visitors' loyalty decreases
- The shift supervisor is distracted from his duties during peak hour, he is forced to dash from one POS to another

## By reducing customer service time you get:

Increase of conversion to payment

Customer loyalty improvement

Increasing the quantity of receipts per one POS

## Opportunities to:

Monitor the presence of staff in the workplace

Determine the presence or absence of violations from the video frame

Simultaneously process information from the weighing equipment and the POS

Integrate with most retail and cash register systems based on protocols

Investigate incidents from their beginning without having to scroll through the entire till roll

Significantly speed up the process of removing a product from the receipt if the customer so wishes

Conduct marketing conversion analysis when used in conjunction with the **Neuro Counter module**

Conduct 'health monitoring' of the entire system using **Trassir CMS**

# TRASSIR CMS

## Solution for managing an extensive CCTV system in retail

### Basic features

24/7 monitoring of surveillance system

System status reports

Convenient user management, LDAP

Situation Center

Traffic reduction

Centralised server update and management via scripts

### Advantages

You will not miss equipment failure and will not lose important data. Set up notifications or view the status online

To analyse situations, you can create reports on the state of the system for any period. We can customise the CMS and collect reports on any system data

Easy creation of users and flexible management of their rights based on your corporate user system

Security guards will not miss suspicious situations and they do not have to monitor all cameras. You handle only alarms from the right detectors and flexibly set their trigger scenarios

With slow Internet speed or narrow channels, the desired channel can still be viewed by multiple users

You can update all or individual servers at once using the CMS and also manage them via scripts

### For whom:

More than 20 recorders

Many locations with video surveillance

Uninterrupted 24/7 monitoring is critical

# Conversion marketing analysis

## TRASSIR Neuro Counter module

### Intelligent object detector

- Counts visitors based on neural networks
- Excludes employee counting
- Gives an estimate of passability

## TRASSIR Active POS

Gathers marketing analysis of conversion to purchase

Unites groups of people at POS for accurate conversion estimation

# Reduction of losses in cash turnover in the banking system

For POS cash registers and counting rooms

The module is integrated with money counting machine and bank software

Creating a list of all events

Creating and storing evidence base to investigate incidents. The archive of video recordings of all transactions passing through the ATM allows promptly investigating customer claims and the precedents of fraud

Synchronisation of event video monitoring of cash and payment centres using Active POS. Synchronisation of video recording of all of the cashier's actions with the data received from bill counters enables the merging of this information for easy monitoring of all operations with banknotes at any time

# Cases

## SPAR supermarkets

A wide network of retail shops that have service areas and their own cooking facilities. The network is actively expanding.

### Project objectives:

- To reduce losses from shoplifting
- To provide a solution to prevent fraud at POS
- To control the process of independent weighing of goods by customers in self-service areas

### Implementation result:

**30%**

decrease of  
shortage  
quantity

**40%**

decrease of  
losses resulting  
from shoplifting

**60%**

decrease of  
shoplifting theft

# Cases

Largest fast food restaurant chain  
opens more than 500 outlets

## Project objectives:

- Minimising delays in receiving and delivering orders
- Preventing POST fraud
- Preventing theft

## Implementation result:

- Video surveillance as a regulatory control tool
- Collecting statistical data for marketing research without the involvement of third-party services

**2 months**

for payback

**70%**

reduction of financial losses  
resulting from theft

# Additional implemented solutions and development vectors

## Zone for self-checkout

**TRASSIR**  
**ActivePOS**

- Generating incidents at self-service checkout points

## Zone for delivery, Distribution centre, warehouse and logistics hubs

**TRASSIR**  
**ActivePOS**

**TRASSIR**  
**ActiveStock**

- Helps to reduce unidentified losses
- Significantly speeds up the investigation errors and fraud cases
- Optimises the monitoring of shipping and palleting areas
- Helps monitor the movement of goods
- Improves monitoring the work of employees and compliance with safety regulations
