# TRASSIR Parking

monitoring the number of vehicles
in the parking area

TRASSIR Parking

Description

TRASSIR Parking is a script-module for completing the following functions:

- Records cars entering and leaving the parking lot, saving the vehicle number, photo, and the exact time of entry and exit;
- Calculates the length of time vehicles stay in the parking lot;
- Displays information about the current parking status and history of vehicles on the operator's screen.

History of parking entrances

Full history

TRASSIR Parking

The **TRASSIR Parking** operation calls for at least two AutoTRASSIR-30 license plate recognition modules (LPR) (available separately).

When operated in close link with **TRASSIR Parking**, AutoTRASSIR module records the moments the vehicle is caught on video cameras.
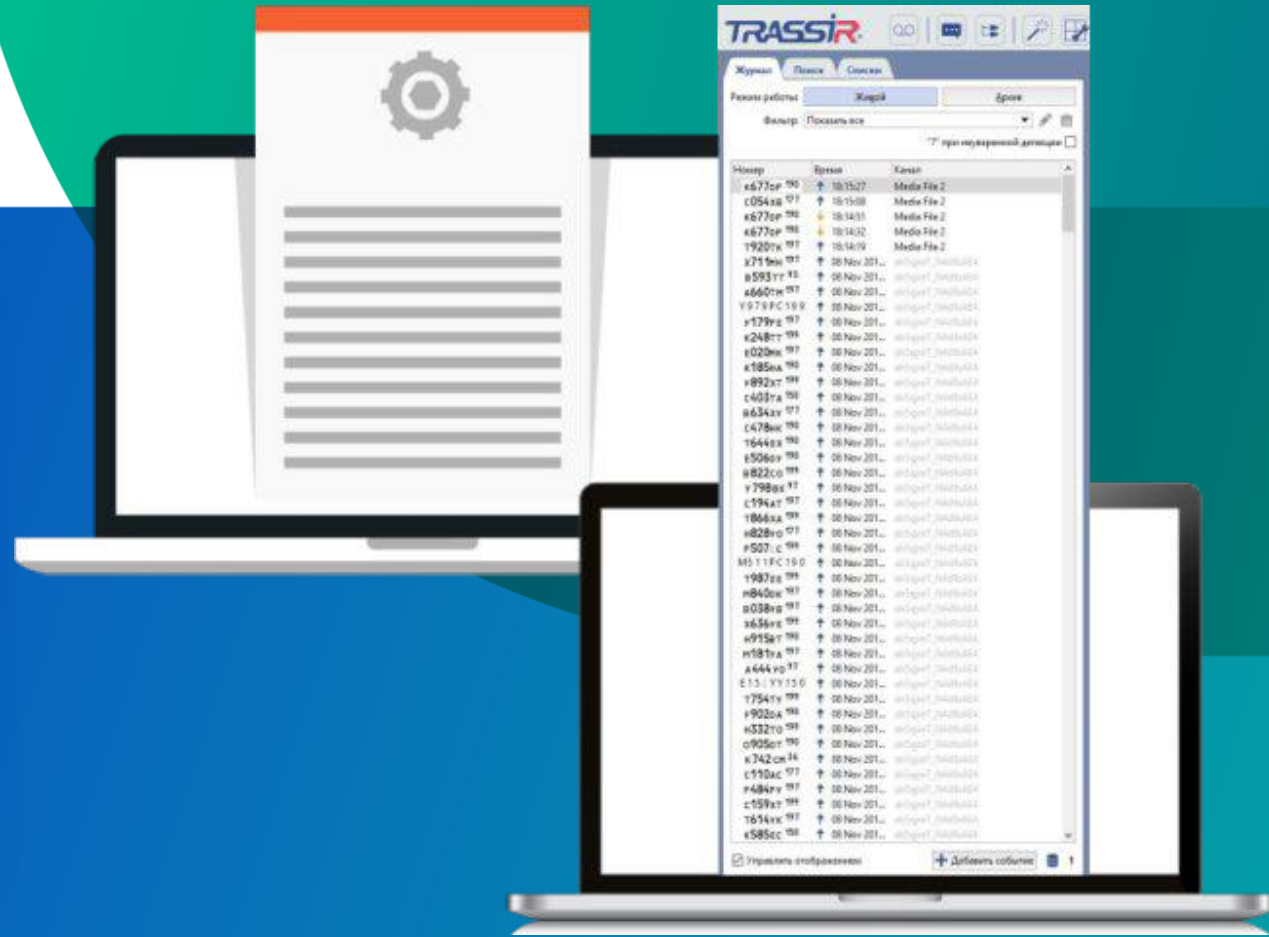

TRASSIR Parking

Description

Based on the received data, **TRASSIR Parking** generates a list of vehicles with the exact time and date of entry/exit of the vehicle.

The generated reports are supported by screenshots taken at the moment the vehicle crossed control points.

TRASSIR Parking

Using the **TRASSIR Parking** module allows owners of office buildings and shopping centers:

- to have a clear picture for presenting parking bills to car owners;

- to know the number of vehicles in the parking area.

TRASSIR Parking

The use of the **TRASSIR Parking** module in conjunction with **AutoTRASSIR** and **ACS** allows the security head of the car fleet, warehouse and customs terminals, parking areas, private estates and other facilities:

- to provide automatic recording of all vehicles passing through the entrance/exit gates.
